Event Report: Smart Environment Monitoring Workshop

Organized by the Department of AIML, GM University

Date: 10/11/25 and 11/11/25

Time: 1:30 to 5 PM

Conducted for 5th Semester GMU AIML Students by 7th Semester GMIT AIML Students

---

1. Introduction

The Department of Artificial Intelligence & Machine Learning (AIML), GM University, organized a hands-on workshop on **"Smart Environment Monitoring using ESP32 + ML + Flutter"** for the **5th semester AIML students**. The session was conducted by **7th semester AIML students from GMIT**, who shared their technical knowledge and project experience with the GMU students.

This workshop was part of the ACM activity initiative to promote practical learning and peer-to-peer teaching.

---

2. Objective of the Workshop

- To provide practical exposure to IoT, Machine Learning, and mobile app integration.
- To help students understand how sensor data is collected, processed, and used for predictions.
- To demonstrate real-time environmental monitoring using ESP32, cloud platforms, and ML models.
- To encourage collaborative learning between GMU and GMIT AIML students.
- To motivate students to build small end-to-end AIoT projects.

---

3. Workshop Content (As Covered in the Session)

The GMIT 7th sem AIML students introduced and demonstrated:

Smart Environment Monitoring Workflow

- Collecting temperature, humidity, and air-quality data using **ESP32**
- Sending sensor data to **Firebase / ThingSpeak / CouchDB**
- Preparing datasets in **CSV/JSON** format
- Training ML models using **scikit-learn / TensorFlow**
- Exporting models using **joblib / TFLite**
- Creating a **Flask API** for predictions
- Building a Flutter mobile app to display:
  - Real-time sensor data

- Predicted temperature/air-quality values
- Charts and alerts using **fl_chart**

ML Concepts Covered

- Data cleaning and preprocessing
- Linear Regression model training
- Model evaluation (MSE, R^2 Score)
- Predictions with new sensor data

---

4. Participation

- 5th semester AIML students of GMU actively participated.
- Students interacted with the GMIT presenters, asked questions, and practiced parts of the workflow.
- The hands-on demonstration created interest among students toward AIoT and ML deployment.

---

5. Outcomes of the Workshop

- Students gained a clear understanding of how IoT and ML work together.
- They learned how to collect sensor data, train predictive models, and integrate them with apps.
- Improved confidence in using ESP32, Firebase/ThingSpeak, Flask, and Flutter.
- Students expressed interest in developing similar mini-projects for upcoming semesters.
- Strengthened collaboration between GMU AIML and GMIT AIML departments.

---

6. Conclusion

The workshop was a successful skill-building activity for the 5th semester AIML students of GM University.

The initiative by GMIT 7th semester students helped bridge theoretical concepts with practical implementation.

The Department of AIML plans to continue organizing such collaborative learning programs to enhance students' technical exposure and project-based learning.

"ACM Activity Post quiz"

chaithradhumwad.fet.scst.aiml@gmu.ac.in Switch account

* Indicates required question

Email *

☐ Record **chaithradhumwad.fet.scst.aiml@gmu.ac.in** as the email to be included with my response

1. What is the ESP32 primarily used for in a smart environment system? *

- Displaying data
- Sending sensor data and processing
- Making prediction
- Storing data permanently

2. Which of the following sensors can measure air quality? *

- DHT11
- MQ-135
- BMP180
- LDR

3. Machine Learning helps in *

- Displaying sensor data
- Making predictions from data
- Turning sensors on/off
- Controlling app layout

4. Flutter is mainly used to: *

- Build mobile and web applications
- Train ML models
- Control sensors
- Store data on ESP32

5. ESP32 sends data to the app using: *

- USB
- Wi-Fi or Bluetooth
- HDMI
- GPS

6. Which protocol is commonly used for IoT communication? *

- FTP
- MQTT
- SMTP
- POP3

7. Which of the following is NOT a function of the ML model in this system? *

- Predicting pollution levels
- Sending notifications
- Classifying air quality
- Learning from past data

8. Which platform is best for building a cross-platform mobile app? *

- Flutter
- Arduino IDE
- TensorFlow
- MATLAB

9. Why is ESP32 preferred over Arduino Uno for IoT projects? *

- More GPIO pins
- Inbuilt Wi-Fi and Bluetooth
- Lower cost
- None of these

10. Which component helps users see live air quality updates on their phones? *

- ◯ Sensor
- ◯ Flutter app
- ◯ Battery
- ◯ SD card

Submit
